

Hot & Cool For Skin care
reevaa **S**

Description

A massager capable of galvanic and ultrasonic heating and cooling functions as a single device that absorbs the active ingredients of cosmetics deep into the skin layer or, conversely. Discharges waste from the skin layer by using the principle of pushing and pulling positive and negative ions of galvanic ions.

How to use

Therapy

Galvanic / ultrasonic / thermal / cooling functions are all in one device. Clean mode, Nutrition mode, and Boost mode combine the functions required for each mode smartly. 3 MHz ultrasound, which vibrates 3 million times per second, gives hypoallergenic massage to sensitive facial skin. The cooling function calms the skin and helps with elasticity. Adjustable output, ion strength, and temperature. Possession of patented technology. Automatic off function after 12 minutes for skin stabilization.

Feature

Specification

Model name	reevaa S
Voltage	3.6V 2600mA Lithium ion battery
Weight	207g
Product size	42 x 65 x 179 (mm)
Country of origin	Republic of Korea

Distributor
Liberwill
LIBERWILL CO., LTD. www.liberwill.com
WhatsApp + 82-10-6328-9223, M. info@liberwill.com

Feature by Mode

1. CLEAN MODE

- The heat at approximately 42°C opens skin pores and improves blood circulation.
- ⊕ion pulls waste products to clean skin and exfoliate skin.

Differences may occur depending on the usage environment and settings.

2. NUTRITION MODE

- The heat at approximately 42°C opens skin pores and improves blood circulation.
- Microvibration 3 million times per second with 3 MHz ultrasonic waves provides hypoallergenic massage and stimulates cells in the skin to improve elasticity.
- ⊖ions penetrate the active ingredients of cosmetics deeply.

3. BOOSTING MODE

- The cooling function at approximately 12°C closes pores and soothes the skin.
- ⊕⊖ ions come out at the same time to give skin elasticity.
